I attended medical school at the University of Oregon. I was doing a residency in general surgery at the University of Utah, on my way to a career in orthopedics, when a professor encouraged me to look at the Crow-Cheyenne reservation hospital in Crow Agency, Montana. That is how I got interested in rural family practice.

I remember delivering an infant at 1 AM and thinking sadly, "This is the last infant I'll ever deliver." My wife said, "Why don't you stay with family practice since you love it so much?"

In Oregon, I am active in setting up a new rural family residency program and have third-year residents work with me in my practice. But how do you pass on values? How do you teach compassion? The only way to make the point is by example.

It is a myth to think that your position will bring happiness in life. The secret is to feel deeply, to share life, and to be needed.

Editor's Note

The ARCHIVES would like to have you in our "Family Album." Send your submissions c/o the Editor. We are interested in high-quality color slides of family physicians involved with their work, with their own families, and in other interesting settings. Be sure to include your name, address, and daytime telephone number.
