

A HIGHLY EFFICIENT SYNTHESIS OF 1-METHYL-, 1-BENZYL-, AND
1-PHENYL-1,2,3,4-TETRAHYDROISOQUINOLINES BY A MODIFIED
PUMMERER REACTION

Abstract -- (±)-1-Methyl- (**13b**), (±)-1-benzyl- (**13c**), and (±)-1-phenyl- (**13d**)-1,2,3,4-tetrahydroisoquinolines, which are supposed to participate in the pathogenesis of Parkinson's disease, were prepared by using a modified Pummerer reaction as a key step in excellent overall yields from the commercially available ketones (**4b-c**).

Isoquinoline alkaloids formed endogenously in mammals have received attention since they are supposed to participate in the pathogenesis of Parkinson's disease.¹ Recently, Takano *et al.* developed a route of synthesizing 1,2,3,4-tetrahydroisoquinolines (TIQs) *via* sulfoxide-mediated electrophilic intramolecular cyclization by Pummerer reaction.² In the preceding paper,³ we reported two revised methods of Takano's TIQ synthesis; one is the use of trifluoroacetic anhydride (TFAA) in benzene at room temperature (Method A) and the other involves a sequential treatment with TFAA and BF₃•Et₂O (Method B). Method A is only applicable to the synthesis of TIQs possessing OMe group in the benzene ring (ex. **1a**). On the other hand, Method B is highly efficient for preparing TIQs which do not possess OMe group in the benzene ring (ex. **1b**). We also found that the formyl group used for *N*-protection plays an important role in effecting the intramolecular cyclization.³

In this paper we describe a highly efficient synthesis of 1-methyl-, 1-benzyl- and 1-phenyl-1,2,3,4-tetrahydroisoquinolines (1-MeTIQ, 1-BnTIQ, and 1-PhTIQ) which expands the utility of the modified Pummerer reaction. The target compounds are known to be present in mammalian brain, and 1-MeTIQ

protects Parkinsonism,⁴ while 1-BnTIQ induces the syndrome⁵ and 1-PhTIQ is a candidate involved in the pathogenesis of Parkinson's disease.⁶

Scheme 1

N-Arylmethyl-*N*-[2-(phenylsulfinyl)ethyl]formamides (**8a-d**) were prepared in good overall yields as follows (Table 1). Condensation of ketones (**4a-d**) with 2-phenylthioethylamine⁷ in the presence of titanium tetrakisopropoxide⁸ followed by NaBH₄ reduction of the resulting imines (**5a-d**) gave *N*-arylmethyl-2-(phenylthio)ethylamines (**6a-d**) in good yields. Treatment of **6a-d** with 98-100% formic acid-acetic anhydride gave *N*-formyl derivatives (**7a-d**) in excellent yields. The products were then oxidized with sodium metaperiodate to give sulfoxides (**8a-d**), though sulfones (**9a-d**) were yielded as each by-product in a few percent yields.

The intramolecular cyclization of *N*-formyl sulfoxide (**8a**) with OMe groups in the benzene ring, on treatment with TFAA in benzene at room temperature (Method A), readily occurred to give *N*-formyl-6,7-dimethoxy-1-methyl-4-phenylthio-TIQ (**10a**) in a quantitative yield. On the other hand, application of this condition to the sulfoxide (**8b**) without OMe group in the benzene ring, caused merely extensive decomposition to yield an intractable mixture. However, this situation dramatically changed when the Method B condition was applied to this reaction. After **8b** was treated with TFAA in benzene at room temperature for 1 h, BF₃•Et₂O was added to this solution. This mixture was allowed to react for further 1 h at room temperature. Thus, the reaction gave *N*-formyl-1-methyl-4-phenylthio-TIQ (**10b**) in 97% yield. Other *N*-formyl sulfoxides (**8c**) and (**8d**) on similar treatment with TFAA and BF₃•Et₂O gave *N*-formyl-1-benzyl- (**10c**) and *N*-formyl-1-phenyl-4-phenylthio-TIQ (**10d**) in 96% and 94% yields, respectively. The ¹H-NMR spectra of the TIQs showed very complex signals, suggesting that the compounds are a mixture of stereoisomers at C-1 and C-4 positions. In fact, the respective diastereomers of **10d** were obtained by column chromatographic separation in 87% and 7% yields. This diastereomeric relationship of these compounds, although the stereochemistry was not clarified, was confirmed by yielding the same TIQ (**11d**) on reductive desulfurization with NiCl₂-NaBH₄.

Thus, the intramolecular cyclization *via* the Pummerer reaction using Method B proceeded very smoothly, proving that the method is very effective for constructing TIQ skeleton even in the cases without activating group (OMe) in the nucleophilic benzene ring.

Scheme 2

Reductive elimination of the phenylthio group of **10a-d** with $\text{NiCl}_2\text{-NaBH}_4$ in MeOH-THF gave *N*-formyl-TIQs (**11a-d**) in excellent yields as shown in Table 1, although 1,2-elimination products (**12a-d**) of phenylthio group were accompanied in a few percent yields. The $^1\text{H-NMR}$ spectra of **11a-d** measured either at room temperature or at 90°C showed signals due to two rotational isomers of the formyl group as observed in *N*-acetyl TIQ derivatives.⁹

The formyl group of **11a-d** was readily deprotected by alkaline or acid hydrolysis to give 6,7-dimethoxy-1-MeTIQ (salsolidine) (**13a**), 1-MeTIQ (**13b**), 1-BnTIQ (**13c**), and 1-PhTIQ (**13d**). LiAlH_4 reduction of **11a-d** gave *N*-methyl-6,7-dimethoxy-1-MeTIQ (carnegine) (**14a**), *N*-methyl-1-MeTIQ (**14b**), *N*-methyl-1-BnTIQ (**14c**), and *N*-methyl-1-PhTIQ (**14d**) as shown in Table 1. Thus, ($\pm$)-1-MeTIQ, ($\pm$)-1-BnTIQ and ($\pm$)-1-PhTIQ, and their *N*-methyl derivatives were prepared in 7 steps from the respective ketone in

55-68% overall yields.

This method for preparing TIQ is excellent not only in high efficiency but also in ready availability of the starting material, and has an advantage of isotope-labeling into the TIQ skeleton since this route includes two reductive steps using sodium borohydride.

Table 1. Preparation of 1,2,3,4-Tetrahydroisoquinolines

* A : TFAA, B: TFAA-BF₃•Et₂O.

EXPERIMENTAL

General Notes. Unless otherwise noted, the following procedures were adopted. Melting points were taken on a Yanagimoto SP-M1 hot-stage melting point apparatus and are uncorrected. IR spectra were obtained as films for oils and gums, and KBr disks for solids with a JASCO FT/IR-5000 spectrophotometer, and are given in cm⁻¹. NMR spectra were measured on a JEOL JNM-EX 90 (¹H, 90 MHz) spectrometer in CDCl₃ with tetramethylsilane as an internal standard, and the chemical shifts are given in δ values. The following abbreviations are used; s = singlet, d = doublet, t = triplet, q = quartet, dd = double doublet, m = multiplet, and br = broad. LRMS and HRMS were taken on a JEOL JMS-AX 505H spectrometer at 70 eV (EIMS) or at 270 eV (CIMS, reactant gas: *iso*-butane) using direct or GC/MS inlet systems, and figures in parentheses indicate the relative intensities. TLC was performed on Merck precoated Silica gel 60 F₂₅₄ plates (Merck). Column chromatography was carried out with silica gel (Wakogel C-200). The organic extract from each reaction mixture was washed with brine, dried over anhydrous Na₂SO₄, and concentrated *in vacuo* to dryness. The known TIQs were also characterized by MS, IR, and ¹H-NMR examinations.

Preparation of *N*-Arylmethyl-2-(phenylthio)ethylamines (6a-d)

A mixture of 4a-d (5 g), 2-phenylthioethylamine⁷ (1.2 molar eq), and titanium tetraisopropoxide (1.5 molar eq) was heated at 80°C for 3 h. After cooling, the reaction mixture was diluted with MeOH (100 mL). To this solution, NaBH₄ (1 molar eq) was added in small portions under ice-cooling. The reaction mixture was stirred at rt for 1 h and concentrated *in vacuo*. Water (*ca.* 40 mL) was added to the residue, and the mixture was diluted with MeOH (*ca.* 500 mL). After removal of precipitated inorganic materials by filtration, the filtrate was concentrated *in vacuo*. The residue was dissolved in water and extracted with CHCl₃. The products (6a-d) were purified by column chromatography.

General Procedure for the Pummerer Cyclization of Sulfoxides (8)

Method A: TFAA (5 molar eq) was added to a solution of a sulfoxide (**8a**) (3 g, 8.31 mM) in dry benzene (50 mL) at rt, and the mixture was stirred for 20 h. The reaction mixture was concentrated *in vacuo*, and the product (**10a**) were purified by column chromatography.

Method B: TFAA (5 molar eq) was added to a solution of a sulfoxide **8b-d** (each 3 g) in dry benzene (50 mL) at rt, and the mixture was stirred for 1 h. $\text{BF}_3 \cdot \text{Et}_2\text{O}$ (3 molar eq) was added and stirring was continued at the same temperature for 1 h. The reaction mixture was washed with 5% $\text{NaOH-H}_2\text{O}$. The products (**10b-d**) were purified by column chromatography. The Pummerer reaction of **8d** gave separable two diastereomers (**10d-A**, yield: 87%, **10d-B**, yield 6.6%, total yield: 93.6%) by column chromatography. Each diastereomers (**10d-A** and **10d-B**) gave the same products (**11d**) and (**12d**) by reductive desulfurization.

2-Formyl-1,2,3,4-tetrahydro-6,7-dimethoxy-1-methyl-4-phenylthioisoquinoline (10a): Eluent for column chromatography: AcOEt-*n*-hexane (1:1). Yield: 96%. Colorless gum. IR: 1669 ($=\text{N-CHO}$), 1518, 1439, 1257. $^1\text{H-NMR}$: 1.45, 1.53 (total 3H, each d $J=6.5$ Hz, $=\text{CHCH}_3$), 3.20-4.90 (3.5H,

-SCHCH₂N=, =CHCH₃), 3.86, 3.88, 3.90 (total 6H, each s, 2 x -OCH₃), 5.44 (0.5H, q, $J=6.5$ Hz, =CHCH₃), 6.56, 6.59, 6.74, 6.77 (total 2H, each s, Ar-H), 7.20-7.70 (5H, m, Ar-H), 8.03, 8.26, 8.46 (total 1H, each s, =N-CHO). EIMS m/z : 343 (M^+ , 2), 234 (base peak), 218 (64), 206 (17), 190 (56), 174 (26), 146 (13), 110 (16). HRMS: Calcd for C₁₉H₂₁NO₃S: 343.1243. Found: 343.1205.

2-Formyl-1,2,3,4-tetrahydro-1-methyl-4-phenylthioisoquinoline (10b): Eluent for column chromatography: AcOEt-*n*-hexane (1:1). Yield: 97%. Pale yellow gum. IR: 1671 (=N-CHO), 1582, 1433, 1400. ¹H-NMR: 1.46, 1.51 (total 3H, each d, $J=6.5$ Hz, =CHCH₃), 3.10-3.90, 4.60-4.80 (total 3H, each m, -SCHCH₂N=), 4.83, 5.51 (total 1H, each q, $J=6.5$ Hz, =CHCH₃), 7.00-7.90 (9H, m, Ar-H), 8.00, 8.23, 8.43 (total 1H, each s, =N-CHO). EIMS m/z : 183 (M^+ , 3), 174 (71), 173 (base peak), 158 (43), 146 (30), 144 (22), 130 (46), 129 (55). CIMS m/z : 284 (MH⁺, base peak), 216 (3), 176 (35), 175 (11), 174 (50), 173 (13). HRMS: Calcd for C₁₇H₁₇NOS: 283.1030. Found: 283.1018.

2-Formyl-1,2,3,4-tetrahydro-1-phenylmethyl-4-phenylthioisoquinoline (10c): Eluent for column chromatography: *n*-hexane-AcOEt (2:1). Yield: 96%. Colorless cake. IR: 1669 (=N-CHO), 1582, 1495, 1431, 1402. ¹H-NMR: 2.80-3.55, 4.30-4.90 (5.5H, -SCHCH₂N=, ArCH₂-, -CH=), 5.74 (0.5H, t, $J=6.0$ Hz, -CH=), 6.95-7.75 (14H, m, Ar-H), 7.65, 7.95 (total 1H, each s =N-CHO). EIMS m/z : 268 (M-91, base peak), 240 (8), 158 (50), 130 (84), 123 (11), 103 (10), 91 (7). CIMS m/z : 360 (MH⁺, base peak), 252 (45), 250 (35).

2-Formyl-1,2,3,4-tetrahydro-1-phenyl-4-phenylthioisoquinoline (10d-A) (diastereomer A): Eluent for column chromatography: AcOEt-*n*-hexane (1:1). Yield: 87%. Colorless plates. mp 148-150°C (from AcOEt-*n*-hexane). IR: 1669 (=N-CHO), 1493, 1481, 1458, 1429, 1400, 1361. ¹H-NMR: 3.05-3.80, 4.40-4.65 (total 3H, each m, -SCHCH₂N=), 5.80, 6.70 (total 1H, each s, -CH=), 6.90-7.70 (14H, m, Ar-H), 8.05-8.66 (total 1H, each s, =N-CHO). EIMS m/z : 345 (M^+ , 1), 235 (base peak), 208 (14), 206 (18.7), 178 (13), 158 (55), 130 (57), 103 (11). CIMS m/z : 346 (MH⁺, base peak), 236 (9). Anal. Calcd for C₂₂H₁₉NOS: C, 76.49; H, 5.54; N, 4.05. Found: C, 76.40; H, 5.69; N, 4.04.

2-Formyl-1,2,3,4-tetrahydro-1-phenyl-4-phenylthioisoquinoline (10d-B) (diastereomer B): Eluent for column chromatography: AcOEt-*n*-hexane (1:1). Yield: 6.6%. Pale yellow gum. IR: 1671 (=N-CHO), 1454, 1431, 1398, 1185. ¹H-NMR: 3.05-3.90, 4.25-4.60 (total 3H, each m, -SCHCH₂N=), 5.68, 6.62 (total 1H, each s, -CH=), 6.70-8.04 (14H, m, Ar-H), 8.06, 8.41 (total 1H, each s, =N-CHO). EIMS m/z : 345 (M^+ , 22), 235 (base peak), 208 (19), 206 (19), 178 (20), 158 (71), 130 (74), 103 (13). HRMS: Calcd for C₂₂H₁₉NOS: 345.1187. Found: 345.1161.

Reductive Desulfurization of 2-Formyl-4-phenylthio-TIQs (10)

NaBH₄ (10.5 molar eq) was added in small portions to a stirred solution of one of **10a-d** (each 2 g) with NiCl₂•6H₂O (3.5 molar eq) in MeOH-THF (3:1) (120 mL) under ice-cooling. After the addition, stirring was continued at rt for 30 min. The reaction mixture was filtered and the filtrate was concentrated *in vacuo*. The residue was suspended in water, acidified with 5% HCl-H₂O, and extracted with CHCl₃. The products (**11a-d**) and the by-products (**12a-d**) were separated by column chromatography.

2-Formyl-1,2,3,4-tetrahydro-6,7-dimethoxy-1-methylisoquinoline (11a): Eluent for column chromatography: AcOEt-*n*-hexane (2:1). Yield: 88%. Colorless gum. (lit.,¹⁰ mp 79-80°C). IR: 1665 (=N-CHO), 1520, 1435, 1257. ¹H-NMR: 1.46, 1.53 (total 3H, each d, $J=7.0$ Hz, =CHCH₃), 2.60-4.50 (total

4H, m, $\text{ArCH}_2\text{CH}_2\text{N=}$), 3.86 (6H, s, 2 x $-\text{OCH}_3$), 4.70, 5.38 (total 1H, each q, $J=7.0$ Hz, $=\text{CHCH}_3$), 6.58, 6.60 (each 1H, s, Ar-H), 8.13, 8.29 (total 1H, each s, $=\text{N-CHO}$). EIMS m/z : 235 (M^+ , 28), 220 (base peak), 192 (34), 176 (13), 148 (7). HRMS: Calcd for $\text{C}_{13}\text{H}_{17}\text{NO}_3$: 235.1209. Found 235.1246.

2-Formyl-1,2-dihydro-6,7-dimethoxy-1-methylisoquinoline (12a): Eluent for column chromatography: $\text{AcOEt-}n\text{-hexane}$ (2:1). Yield: 4.0%. Pale yellow gum. IR (KBr): 1686 ($=\text{N-CHO}$), 1636, 1518, 1342, 1270. $^1\text{H-NMR}$: 1.31, 1.39 (total 3H, each d, $J=6.5$ Hz, $=\text{CHCH}_3$), 3.87 (6H, s, 2 x $-\text{OCH}_3$), 4.95, 5.55 (total 1H, each q, $J=6.5$ Hz, $=\text{CHCH}_3$), 5.83, 5.96 (total 1H, d and dd, $J=7.5$ Hz and $J=1.5$, 7.5 Hz, olefinic-H), 6.44, 7.07 (total 1H, d and dd, $J=7.5$ Hz and $J=1.5$, 7.5 Hz, olefinic-H), 6.59, 6.62 (each 1H, s, Ar-H), 8.19, 8.28 (total 1H, each s, $=\text{N-CHO}$). EIMS m/z : 233 (M^+ , 32), 218 (base peak), 203 (7), 190 (69), 175 (21), 174 (22), 146 (20), 117 (6). HRMS: Calcd for $\text{C}_{13}\text{H}_{15}\text{NO}_3$: 233.1052. Found 233.1072.

2-Formyl-1,2,3,4-tetrahydro-1-methylisoquinoline (11b): Eluent for column chromatography: $\text{AcOEt-}n\text{-hexane}$ (1:1). Yield: 85%. Colorless oil.¹⁰ IR: 1671 ($=\text{N-CHO}$), 1433, 1400. $^1\text{H-NMR}$: 1.48, 1.53 (total 3H, each d, $J=6.5$ Hz, $=\text{CHCH}_3$), 2.60-3.80, 4.25-4.55 (total 4H, each m, $\text{ArCH}_2\text{CH}_2\text{N=}$), 4.78, 5.46 (total 1H, each q, $J=6.5$ Hz, $=\text{CHCH}_3$), 7.00-7.30 (4H, m, Ar-H), 8.14, 8.29 (total 1H, each s, $=\text{N-CHO}$). EIMS m/z : 175 (M^+ , 56), 160 (base peak), 132 (71), 117 (27), 115 (18), 105 (18), 91 (10), 77 (12). HRMS: Calcd for $\text{C}_{11}\text{H}_{13}\text{NO}$: 175.0997. Found 175.1034.

2-Formyl-1,2-dihydro-1-methylisoquinoline (12b): Eluent for column chromatography: $\text{AcOEt-}n\text{-hexane}$ (1:1). Yield: 5.2%. Pale yellow oil. IR: 1686 ($=\text{N-CHO}$), 1634, 1574, 1458, 1423. $^1\text{H-NMR}$: 1.33, 1.40 (total 3H, each d, $J=6.5$ Hz, $=\text{CHCH}_3$), 4.93, 5.61 (total 1H, each q, $J=6.5$ Hz, $=\text{CHCH}_3$), 5.89, 6.03 (total 1H, d and dd, $J=7.5$ Hz and $J=1.5$, 5.5 Hz, olefinic-H), 6.51 (0.8H, d, $J=7.5$ Hz, olefinic-H), 6.95-7.35 (4.2H, m, Ar-H, olefinic-H), 8.21, 8.29 (total 1H, each s, $=\text{N-CHO}$). EIMS m/z : 173 (M^+ , 29), 158 (79), 130 (base peak), 115 (8), 103 (21), 77 (15). HRMS: Calcd for $\text{C}_{11}\text{H}_{11}\text{NO}$: 173.0840. Found 173.0851.

2-Formyl-1,2,3,4-tetrahydro-1-phenylmethylisoquinoline (11c): Eluent for column chromatography: $n\text{-hexane-AcOEt}$ (2:1). Yield: 89%. Colorless gum. IR: 1669 ($=\text{N-CHO}$), 1495, 1435, 1402. $^1\text{H-NMR}$: 2.50-3.70, 4.60-4.70 (6H, m, $\text{ArCH}_2\text{CH}_2\text{N=}$, $\text{ArCH}_2\text{-}$), 4.66, 5.64 (total 1H, dd and t, $J=6.0$, 8.5 Hz and $J=6.5$ Hz, $-\text{CH=}$), 7.00-7.50 (9H, m, Ar-H), 7.57, 8.10 (total 1H, each s, $=\text{N-CHO}$). EIMS m/z : 160 (M-91 , base peak), 132 (37), 117 (9), 105 (9). CIMS m/z : 252 (MH^+ , base peak), 160 (13).

2-Formyl-1,2-dihydro-1-phenylmethylisoquinoline (12c): Eluent for column chromatography: $n\text{-hexane-AcOEt}$ (2:1). Yield: 4.8%. Colorless gum. IR: 1668 ($=\text{N-CHO}$), 1632, 1572, 1495, 1458, 1425. $^1\text{H-NMR}$: 3.60-3.20 (2H, m, $\text{ArCH}_2\text{-}$), 4.79, 5.69 (total 1H, dd and t, $J=5.0$, 9.5 Hz and $J=7.0$ Hz, $-\text{CH=}$), 5.85, 6.13 (total 1H, d and dd, $J=7.5$ and $J=1.2$, 7.5 Hz, olefinic-H), 6.49, 6.57 (total 1H, d and dd, $J=7.5$ Hz and $J=1.2$, 7.5 Hz, olefinic-H), 6.90-7.40 (9H, m, Ar-H), 7.41, 8.28 (total 1H, each s, $=\text{N-CHO}$). EIMS m/z : 249 (M^+ , 5), 218 (29), 189 (6), 159 (86), 131 (60), 103 (base peak), 91 (38), 77 (71). CIMS m/z : 250 (MH^+ , base peak), 158 (37), 130 (13). HRMS: Calcd for $\text{C}_{17}\text{H}_{15}\text{NO}$: 249.1153. Found: 249.1134.

2-Formyl-1,2,3,4-tetrahydro-1-phenylisoquinoline (11d): Eluent for column chromatography: $n\text{-hexane-AcOEt}$ (2:1). Yield: 89%. Colorless gum (lit.,¹⁰ mp 78-80°C). IR: 1669 ($=\text{N-CHO}$), 1493, 1454,

1435, 1398. $^1\text{H-NMR}$: 2.70-3.80, 4.05-4.40 (total 4H, each m, $\text{ArCH}_2\text{CH}_2\text{N=}$), 5.77, 6.68 (total 1H, each s, $-\text{CH=}$), 7.00-7.40 (9H, m, Ar-H), 8.16, 8.50 (total 1H, each s, $=\text{N-CHO}$). EIMS m/z : 237 (M^+ , 95), 236 (base peak), 208 (15), 193 (16), 178 (25), 160 (47), 132 (40), 105 (14). HRMS: Calcd for $\text{C}_{16}\text{H}_{15}\text{NO}$: 237.1154. Found: 237.1174.

2-Formyl-1,2-dihydro-1-phenylisoquinoline (12d): Eluent for column chromatography: *n*-hexane-AcOEt (2:1). Yield: 7.9%. Colorless gum. IR: 1684 ($=\text{N-CHO}$), 1632, 1572, 1493, 1456, 1421, 1336. $^1\text{H-NMR}$: 5.91, 6.65 (total 1H, each s $-\text{CH=}$), 5.98, 6.06 (total 1H, d and dd, $J=7.5$ Hz and $J=1.2$, 7.5 Hz, olefinic-H), 6.58 (0.8H, d, $J=7.5$ Hz, olefinic-H), 6.80-7.40 (9.2H, m, Ar-H, olefinic-H), 7.53, 8.35 (total 1H, each s, $=\text{N-CHO}$). EIMS m/z : 235 (M^+ , 71), 206 (12), 204 (10), 178 (8), 158 (base peak), 130 (84), 103 (14), 77 (9). HRMS: Calcd for $\text{C}_{16}\text{H}_{13}\text{NO}$: 235.0997. Found: 235.1023.

Hydrolysis of 2-Formyl-TIQs (11).

Alkaline hydrolysis---A solution of the 2-formyl-TIQs **11a**, **b**, and **d** (each 450 mg) in EtOH (10 mL)-10%NaOH was refluxed for 5-25 h (5 h for **11a-b**, 20 h for **11d**). The reaction mixture was concentrated *in vacuo*, and the residue was diluted with water and extracted with CHCl_3 . The products (**13a,b**, and **d**) were purified by column chromatography.

Acid hydrolysis---A solution of **11c** (450 mg) in EtOH (10 mL)-10% HCl (4 mL) was refluxed for 30 h. The reaction mixture was concentrated *in vacuo*, and the residue was diluted with dil. NaOH and extracted with CHCl_3 . The product (**13c**) was purified by column chromatography.

1,2,3,4-Tetrahydro-6,7-dimethoxy-1-methylisoquinoline (13a) (Salsolidine): Eluent for column chromatography: CHCl_3 -MeOH (8:2). Yield: 91%. Colorless oil. HCl salt: mp 194-195°C. Colorless needles (from EtOH-Et₂O) (lit.,¹¹ mp 188-189°C, HCl salt).

1,2,3,4-Tetrahydro-1-methylisoquinoline (13b): Eluent for column chromatography: CHCl_3 -MeOH (8:2). Yield: 93%. Colorless oil. HCl salt: mp 182-184°C. Colorless needles (from EtOH-Et₂O) (lit.,¹² mp 183-184°C, HCl salt).

1,2,3,4-Tetrahydro-1-phenylmethylisoquinoline (13c): Eluent for column chromatography: CHCl_3 -MeOH (9:1). Yield: 93%. Colorless gum. HCl salt: mp 172-174°C. Colorless plates (from EtOH-Et₂O) (lit.,¹³ mp 170-172°C, HCl salt).

1,2,3,4-Tetrahydro-1-phenylisoquinoline (13d): Eluent for column chromatography: AcOEt. Yield: 92%. Colorless needles. mp 102-104°C (from AcOEt-*n*-hexane) (lit.,¹⁴ mp 73-75°C, lit.,¹⁵ mp 97-98°C).

LiAlH_4 Reduction of 2-Formyl-TIQs (11).

LiAlH_4 (2 molar eq) was added to a solution of **11a-d** (each 500 mg) in dry THF (20 mL) under ice-cooling, and the mixture was refluxed for 1-2 h. Et₂O saturated with water was added to the reaction mixture and insoluble material was filtered off. The product was purified by column chromatography to give **14a-d**. Yields are shown in Table 2.

1,2,3,4-Tetrahydro-6,7-dimethoxy-1,2-dimethylisoquinoline (14a) (Carnegine): Eluent for column chromatography: CHCl_3 -MeOH (95:5). Yield: 86%. Colorless oil. HCl salt: mp 215-218°C. Colorless plate (from EtOH-Et₂O) (lit.,¹⁶ mp 209-211°C, HCl salt).

1,2,3,4-Tetrahydro-1,2-dimethylisoquinoline (14b): Eluent for column chromatography:

CHCl_3 -MeOH (9:1). Yield: 89%. Pale yellow oil. HCl salt: mp 199-203°C. Colorless plate (from EtOH-Et₂O). IR: 1493, 1450, 1373, 1292. ¹H-NMR: 1.39 (3H, d, $J=6.5$ Hz, $=\text{CHCH}_3$), 2.48 (3H, s, $=\text{NCH}_3$), 2.55-3.25 (4H, $\text{ArCH}_2\text{CH}_2\text{N}=\text{}$), 3.60 (1H, q, $J=6.5$ Hz, $=\text{CHCH}_3$), 7.11 (4H, s, Ar-H). EIMS m/z : 161 (M^+ , 3), 160 (5), 146 (base peak), 131 (10), 117 (12), 115 (9), 103 (4). CIMS m/z : 162 (MH^+ , base peak), 146 (7).

1,2,3,4-Tetrahydro-2-methyl-1-phenylmethylisoquinoline (14c): Eluent for column chromatography: CHCl_3 -MeOH (9:1). Yield: 94%. Colorless gum. HCl salt: Colorless gum. IR: 1495, 1454, 1377. ¹H-NMR: 2.49 (3H, s, $=\text{NCH}_3$), 2.55-3.40 (6H, m, $\text{ArCH}_2\text{CH}_2\text{N}=\text{}$, $\text{ArCH}_2\text{-}$), 3.81 (1H, t, $J=6.2$ Hz, $-\text{CH}=\text{}$), 6.70-7.30 (9H, m, Ar-H). EIMS m/z : 146 ($\text{M}-91$, base peak), 131 (8), 115 (3), 103 (3), 91 (3). CIMS m/z : 238 (MH^+ , base peak), 146 (14).

1,2,3,4-Tetrahydro-2-methyl-1-phenylisoquinoline (14d): Eluent for column chromatography: n -hexane-AcOEt (3:1). Yield: 90%. Colorless cake. mp 41-43°C. (lit.,¹⁴ oil, lit.,¹⁷ mp 72°C).
